Newsletter Announcement

Meitav-tec Ltd. is proud to announce the official release of its newsletter.

monthly edition will be made available to all Meitav-tec customers who request it, and will also be available through our website at www.meitavtec.com.

In early 2005, we at Meitav-tec decided the time had come to have a more regular and personal contact with our customers, a way to keep them informed about all the latest and greatest news in our ever-moving business and industry. Every edition will feature new Meitav-tec products, promotional items or sales, company event or news, and of course, dedicated space for reader feedback. We want to hear from you!!

In addition, if you are interested in receiving a workable version of our newsletter, to modify as you wish and send to YOUR mailing list, please send us an email to: info@meitavtec.com and we will be happy to send you a WORD version.

MIGA1-FC-SUPER

The **MIGA-1 Fan Coil Super** has been on the market for many years, proving itself as a reliable and successful product. It provides the OEM user with incredible flexibility in terms of applications, such as auto-change over in 2-pipe systems. And now, the MIGA-1 offers a completely new set of features, which truly make this product unbeatable!! Read more....

The MIGA1-FC-Super is a unique solution for the OEM market, with its flexibility and its all-in-one-unit capabilities.

With only one board and with simple jumper selections, the MIGA1 makes all fan coil applications are possible.

Manufacturing Advantage

Because the MIGA 1 always has the same main board, with the same jumpers and the same options, it allows for hassle-free manufacturing!!

Sales Advantage

Always having the same main board allows the user interface to be selected at the last minute!!!

Available user interfaces:

- Remote control only
- Wall mount thermostat - ETN
- Flush mount thermostat - FMH

Service Advantage

Because the main board is always the same, it has never been easier to answer telephone service calls, and on-line trouble shooting inquiries.

It is this MAXIMUM flexibility of the MIGA1 that is the advantage and that makes all the difference to the OEM type of customers.

FMH-220 Fan Coil Super

The **FMH-220 Fan Coil Super** is the most complete and flexible FC thermostat in the market, with the million dollar look!!! Its flexibility gives customers the advantage of having one main controller for most of their Fan Coil application.

A new and improved revision of the **FMH** is now available and offers more new features than ever...

In today's market, everyone is looking for an edge, an advantage; more features for less.

What distinguishes systems today? The controls. It is the controls that are installed on a system that bring about the desired advantages; installation savings, energy savings and the ability to have ONE control for most applications.

How? The microprocessors used today allow the same hardware to be used for more applications than ever, all in the same unit!! This gives the end user all the advantages they need and want.

Fan coil applications are usually commercial. In order to obtain higher energy savings, and better performance levels, customers on these projects look for special features to restrict the end user.

For example:

- Password protected set point limits. (do not limit the DISPLAY)
- Complete lock the buttons, for public places.
- Remote control option, for HIGH END users.
- Selection of AUTOCHANGE (4-pipe systems) or manual Cool/Heat, (2-pipe systems), selectable in the dip switch.
- Selection of no-valve system- thermostat acts on the fan.

All of these features are built-in the same unit, giving customers the freedom to stock the units but make all final decisions about applications during the actual sale.

In addition, the FMH can be mounted directly inside the fan coil, and used by simply connecting the external sensor!!!

The FMH-220-Fan Coil-Super is the advantage. With the features, high-end look and affordable price, the FMH has it all, for ALL fan coil applications.

Meitav-tec Takes on Carrier!

After long negotiations between Antonio and the client (and many sleepless nights!!!), Meitav-tec is proud to add Carrier Spain to its customer list.

Carrier, one of the biggest players in the international HVAC market, has found that the our quality products and the advanced features we offer, are above and beyond anything the low-cost far east could produce.

As such, in 2005 Carrier will be purchasing more than 5000 units, units that will be custom-made according to client specifications.

The units will mainly be one PROG thermostat, and one NON-PROG thermostat, all in 24Vac - ETN format.

ETN-24-SUPER-SF & ETN-24-SUPER-SF-PROG

This will of course increase our exposure in the European market, and will significantly help get the information about our product out there and known!!!

Good Job Antonio!!!!!!

Quiz

How well do you know HVAC??

Test your knowledge and learn about our products !!!

Each edition of our newsletter will feature one or two intriguing questions...

Remember,

All HVAC questions are fair games, and don't be surprised if you see questions about our own products...we want you to know them better!!!!

This month's questions:

- 1. What does OEM stand for???**
- 2. Is it true that the latest FMH-220-FC-SUPER has an OFF timer??**

Please send your answer to us by mail to: info@meitavtec.com
