

*Meitav-tec is proud to announce that the **new and improved**
MaxiNet 7.0 software is now available.*

The upgraded version of **MaxiNet 7.0** has been already successfully installed in hotels, office buildings and shopping malls worldwide.

MaxiNet 7.0, a web based, Mini BMS application for controlling Central HVAC System, has been designed specifically for small to medium thermostat networks (40-150 units).

*Take a look at MaxiNet's 7.0
powerful features:*

- Remote access to the BMS via the internet & local intranet
- Full control of all units
- Easy installation wizard – "Plug & Play"
- Simple, user friendly interface
- Multi-language interface (further languages can be added)
- Allows gradual expansion of network
- Numerous, cost efficient, flexible 'weekly programs' for unit /zone
- 'Special event tool' – unique programs for holidays or special days
- Option to lock end-units through Maxinet
- Controls also other energy consuming devices/systems via I/O Card (CTU1601)

While developing the new software, Meitav-tec has made it a priority to ensure that **MaxiNet 7.0** will remain extremely user friendly with regard to operation and installation as well as cost effective.

MaxiNet 7.0 allows users remote access to the HVAC system from anywhere in the world via internet for easy monitoring and control. This undoubtedly makes it the best solution for both owners and maintenance supervisors.

MaxiNet 7.0 does not require special implementation or in depth knowledge of computers or programming; it is ready to use immediately after having connected the HVAC units. As a mini BMS, **MaxiNet 7.0** can include an I/O card in its network to control other energy consuming devices / systems, such as air compressor, chiller and lights.
