

Floor Heating

Over the last year, it seems as though Floor Heating solutions have been making a comeback. Although they have always had a strong presence on the HVAC market, more and more environments are now specifically asking for Floor Heating systems and controllers.

Known for being a market leader, Meitav-tec has long offered Floor Heating controllers among its range of products. We've decided that the time has come to bring them to light once again and put a special focus on their usefulness and simplicity.

Our Floor Heating controllers cater to various applications based on environment and floor-type. All offer 220Vac, 16Amp HEAT output ONLY, while some controllers also offer IR remote control and/or weekly programming. Special units with Overheat Protection, with special floor temperature sensors, for Parquet floors are particularly interesting for apartment or office buildings.

We invite you take a detailed look at our units and find the right Floor Heating fit for your application.

Meitav-tec Floor Heating Thermostats - Comparison Table

UNIT NAME	Heat Output (220 Vac, 16Amp)	Parquet Application	IR Remote Control	Weekly Program
FE-340-H1	YES	NO	NO	NO
